Actions secrets and variables

Secrets and variables allow you to manage reusable configuration data. Secrets are **encrypted** and are used for sensitive data. [Learn more about encrypted secrets](#). Variables are shown as plain text and are used for **non-sensitive** data. [Learn more about variables](#).

Anyone with collaborator access to this repository can use these secrets and variables for actions. They are not passed to workflows that are triggered by a pull request from a fork.

Secrets

· 1 commit to main since this release

 v0.1.0

 3893ea7

First tagged release. Covers Days 0–3 of the InsiderOne DevOps case study: the service, its container, the Helm chart, and the CI pipeline that lints, tests, scans, and publishes it.

Added

- **Service** — Flask app exposing GET /ping , GET /healthz , and GET /version . Configuration via PORT and BUILD_SHA env vars.
- **Container** — Multi-stage Dockerfile on python:3.12-slim , runs as non-root appuser (uid 1000) with /usr/sbin/nologin . Entrypoint is gunicorn (2 workers); HEALTHCHECK uses Python stdlib (no curl/wget shipped in the runtime layer).
- **Helm chart** — charts/app/ with Deployment, Service, Ingress, ConfigMap, Secret. Liveness and readiness probes target /healthz . Container resources: requests cpu 100m / mem 128Mi , limits cpu 500m / mem 256Mi . Pod-level securityContext enforces runAsNonRoot and drops all capabilities.
- **Environments** — values-dev.yaml (1 replica, dev host) and values-prod.yaml (2 replicas, prod host). All other values intentionally identical so both envs exercise the same shape.
- **CI pipeline** (.github/workflows/ci.yaml) running on every PR, push to main , and v* tag:
 - lint — ruff with E/F/I/B/UP rule set
 - test — pytest (3 unit tests covering all endpoints)
 - gitleaks — full-history secret scan with --redact
 - aws 0IDC (whoami) — assumes an IAM role via GitHub's OIDC token and runs aws sts get-caller-identity (no long-lived AWS credentials in repo or CI)
 - build, scan, push — Docker build, Trivy scan failing on CRITICAL/HIGH (--ignore-unfixed), conditional push to GHCR. PRs build and scan only; main pushes :main and :<short-sha> ; v* tags push :<semver> and :latest .
- **Repo hygiene** — .gitignore , .env.example , .dockerignore , docker-compose.yaml for local dev, pyproject.toml (ruff config), CODEOWNERS, PR template, branch protection on main requiring all CI checks green.

Image artifacts

This release publishes:

- ghcr.io/ayberksavas/devops-case-app:0.1.0
- ghcr.io/ayberksavas/devops-case-app:latest

The chart's appVersion is 0.1.0 , matching the image tag.

24 HEAD is now at 4147580 feat: auto-deploy to minikube via OIDC + SSM after merge (#10)

25 ==> Deploying ghcr.io/ayberksavas/devops-case-app:4147580

26 Release "app" has been upgraded. Happy Helming!

27 NAME: app

28 LAST DEPLOYED: Sat May 23 15:50:52 2026

29 NAMESPACE: default

30 STATUS: deployed

31 REVISION: 5

32 NOTES:

33 Release: app (app-0.1.0, app 0.1.0)

34 Namespace: default

35 Replicas: 2

36

37 Check rollout:

38 kubectl -n default rollout status deployment/app

39 kubectl -n default get pods -l app.kubernetes.io/instance=app

40

41 Ingress host(s):

42 http://devops-case.local/

43

44 To reach it from outside the cluster on minikube:

45 # one option: add the host to /etc/hosts pointing at \$(minikube ip)

46 echo "\$(minikube ip) devops-case.local" | sudo tee -a /etc/hosts

47 curl http://devops-case.local/ping

48 ==> Rollout status:

49 deployment "app" successfully rolled out

50

51 Deployed ghcr.io/ayberksavas/devops-case-app:4147580

52
